Abstract of DE3816060

The invention relates to a passenger vehicle with a two-part hard top comprising a shell-shaped rear hard top part 1 and a centre part 4 which can be inserted between the front roof seal 2 of the vehicle body 3 and the rear hard top part 1. In order to have the two hard top parts 1 and 4 constantly available in the passenger vehicle and hence to be able to convert the passenger vehicle easily from a coupé into a targa or a cabriolet and vice versa, the invention envisages that the rear hard top part 1 be mounted on the vehicle body 3 in a manner such that it can pivot about at least two pivots 14, 15 arranged transversely with respect to the longitudinal axis of the vehicle and arranged at a distance from each other in the longitudinal axis of the vehicle, and such that it can at the same time be moved linearly in the longitudinal axis of the vehicle.
